novel anti-alpha integrin d monoclonal antibodies to inhibit hage infiltration and reduce inflammation at central nervous system injury sites. Use of

Example 5; Fig 1; 270pp; English

Integrins are a class of membrane-associated molecules that participate in cellular adhesion. Integrins are made up of an alpha subunit and a beta subunit. One class of human integrins are restricted to expression in white blood cells and have a common beta2 subunit: the leukocyte integrins, Leu-CAMS, leukointegrins or beta2 integrins. Beta2 integrins con an important role in immune and inflammentory responses. The present cor protein sequence is the human integrin alpha subunit CD11c. This sequence was used in an alignment to identify a novel beta2 integrin alpha comproximately 66% identity to the protein sequence of alpha d. The capproximately 66% identity to the protein sequence of alpha d. The chipha d gene and protein may be useful in therapy for diseases linked to aberrant alpha d function e.g. Type I diabetes, atherosclerosis, multiple confirms in addition, anti-alpha d monoclonal antibodies may be used in the inhibition of macrophage infilitation at the site of a central nervous system injury. The monoclonal antibodies can also be used to detect and diagnose Crohn's disease

The invention relates to promoting locomotor recovery, inhibiting an locomotor damage, limiting locomotor impairment, or limiting autonomic and sensory dysfunction following spinal cord injury by administering an anti-alpha d (Beta2 integrin alpha2 subunit) monoclonal antibody to a nati-alpha d (Beta2 integrin alpha2 subunit) monoclonal antibody to a nati-alpha d (Beta2 integrin alpha2 subunit) monoclonal antibody to a spinal cord injury victim. The method also involves the use of a ligand selected from ICAM-R or VCAM-I (intracellular cell adhesion molecule, vascular cell adhesion molecule). The method is useful for promoting impairment, or limiting autonomic and sensory dysfunction following spinal cord injury. In particular, the spinal cord injury comprises compression of the spinal cord. The antibodies are also useful for reducing inflammation at the site of a central nervous system injury. The specification also details the identification of Beta2 integrin alphab con a minital and conditions are also useful for are implicated in diseases such as LAD (leukocyte adhesion deficiency, inflammatory response, diabetes, multiple sclerosis, arthritis, graft atherosclerosis, inflammatory bowel disease, Crohn's disease, ulcerative Beta2 integrin; alphaD subunit; CD11c subunit; CD11b subunit; LAD; leukocyte adhesion deficiency; inflammatory response; diabetes; multiple sclerosis; arthritis; graft atherosclerosis; neuroprotective; inflammatory bowel disease; Crohn's disease; ulcerative colitis; immune complex alveolitis; leukaemia; ICAM-R; VCAM-1; anti-inflammatory; infracellular cell adhesion molecule; vascular cell adhesion molecule; autonomic dysfunction; sensory dysfunction; spinal cord injury. Use of an anti-alpha-d monoclonal antibodies for promoting locomotor recovery, inhibiting locomotor damage, limiting locomotor impairment, or limiting autonomic and sensory dysfunction following spinal cord injury. The invention describes genes (I) which are differentially regulated in prostate cancer. (I) Is useful for diagnosing a prostate cancer in a sample comprising prostate tissue, which involves determining the number of target genes which are differentially-regulated in the sample, where the number is indicative of the probability that the sample comprises concer. (I) Is useful for assessing a therapeutic or preventive intervention in a subject having a prostate cancer, which involves certaining the expression levels in a sample comprising prostate tissue of target genes which are differentially-regulated in prostate cancer. Or fraget genes which are differentially-regulated in prostate cancer. Or fraget genes which are differentially-regulated in prostate cancer contivity of a polypeptide differentially-regulated in prostate cancer calls, which involves contacting a polypeptide differentially-regulated contacting a polypeptide differentially defined activity of the test agent markers abiological activity of the polypeptide, and determining whether the test agent modulates the biological activity. (I) is useful as molecular markers, as drug targets, and for detecting, diagnosing, staging, grading, assessing, monitoring, prognosticating.

Cronditions especially relating to prostate cancer. (I) and its expression conditions especially relating to prostate cancer. (I) and its expression products are used in the diagnostic test to assay for presence of cancer c. e.g., in tissue sections, in biopsy sample, in total RNA, in lymph, in blood etc. (I) is useful for assessing cancer e.g., to determine the type of cancer, its stage of development, the nature of genetic defect, etc. (The polypeptide encoded by (I) can be used as target for therapy or drug discovery. (I) can also be used for expressing the polypeptide and thus for searching specific binding partners of the polypeptide. (I) is useful con the rappeutic applications to treat prostate cancer. The identification of specific genes, and groups of genes, expressed in pathways (C) physiologically relevant to prostate cancer permits the definition of the functional and disease pathways and the delineation of targets in these cancer may be addinguised to targets in these captures. This is the anion acid sequence of a protein differentially regulated in prostate cancer.

A probe based on a partial cDNA clone (given in AAQ91727) of canine alpha -TM1 was used to screen a human spleen cDNA library to identify clone 19A2 encoding the beta-1 integrin alpha-subunit, alpha-d. The cDNA was manigulated to allow expression of recombinant alpha-d subunit in COS and CHO cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            544

                                                                                                                                                                                                                                                       This polypeptide comprises a novel human beta 2 integrin subunit, designated alpha d. Its sequence was deduced from a cDNA clone (see AAT79220) isolated from a spleen cDNA library. Alpha d is involved in cell ingration, phagocytosis and cell-cell interaction. Recombinant alpha a polypeptides can be expressed in transformed host cells for use in assays for identifying antibodies or other compounds that modulate alpha d activity or which modulate the interaction between alpha d and a civity or which modulate the interaction between alpha d and a ligand, for treating or preventing diseases in which macrophages are implicated. Treatment is applicable to disease states in which alpha d binding, or tocalised accumulation of cells which express alpha d, is implicated such as such as type I diabetes, atheroselerosis, multiple sclerosis, asthma, psoriasis, lung inflammation, acute respiratory distress syndrome and rheumatoid arthritis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      65 OCDYSTGSCEPIRLQVPVEAVNWSLGLSLAATTSPPQLLACGPTVHQTCSENTYVKGLCF 124

This represents a human beta2 integrin alpha subunit (alpha d)

polypeptide. This is used in the methods of the invention for isolating a polypeptide. This is used in the methods for the invention for isolating a polymuctoride encoding a protein that binds to alpha d. The method comprises transforming or transfering host cells with a DNA construct comprising a reporter gene under the control of a promoter regulated by a transcription factor having a DNA-binding domain and activating domain. A first hybrid DNA sequence encoding a fusion of at least part of alpha d and either the DNA-binding domain or the activating domain of the transcription factor and a library of hybrid DNA sequences encoding tissions of at least part of putative alpha d-binding proteins and the DNA binding domain of the transcription factor which is not incorporated in the first fusion are expressed in the host cells. The binding of an alpha d-binding protein to alpha d in a particular host cell is detected by determining production of the reporter gene product in the cell. The hybrid DNA sequence encoding the alpha d-binding protein can be isolated from the cell. Alpha d may be useful for treating graft arteriosclerosis, aberosclerosis, diabetes, useful for treating graft arteriosclerosis, aberosclerosis, diabetes,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              184

Patent No. 5437958
GENERAL INFORMATION:
APPLICANT: Gallatin, W. Michael
APPLICANT: Van Der Vieren, Monica
TITLE OF INVENTION: No. 543795881 Human 2 Integrin Alpha
TITLE OF INVENTION: Subunit
NUMBER OF SEQUENCES: 29
CORRESPONDENCE ADDRESS: 29
CORRESPONDENCE ADDRESS: 3 Acker Drive, 6300 Sears Tower
CITY: Chicago
STATE: Illinois
COUNTRY: USA
ZIP: 6066-6402
COMPUTER: Floppy disk
COMPUTER: Floppy disk
COMPUTER: PRADABLE FORM:
MUDIUM TYPE: Ploppy disk
COMPUTER: Patentin Release #1.0, Version #1.25
CURSENT APPLICATION BATA:
FILING DATE:
CLASSIFICATION NUMBER: 35,302

GREBRAL INFORMATION:

APPLICANT: Gallatin, W. Michael

APPLICANT: Gallatin, W. Michael

APPLICANT: Wan der Vieren, Wonica

TITLE OF INVENTION: No. 5831029el Human 2 Integrin Alpha Subumit

NUMBER OF SCUENCES: 103

ADDRESSE: Marshall, O'Toole, Gerstein, Murray & Borun

STREET: 233 South Wacker Drive, 6300 Sear Tower

CITY: Chicago

TATE: Illinois

CONNTRY: United States

ZIP: 6606-640

COMPUTER READABLE FORM:

MEDIUM TYPE: Ploppy disk

COMPUTER READABLE FORM:

MEDIUM TYPE: Ploppy disk

COMPUTER READABLE FORM:

MEDIUM TYPE: Ploppy disk

COMPUTER: 1BM PC Compatible

OPERATING SYSTEM: PC-1094/MS.D33

APPLICATION NUMBER: US 08/142,293A

FILING DATE: 21-DEC-1993

PRIOR APPLICATION NUMBER: US 08/32,652

PRIOR APPLICATION NUMBER: US 08/32,652

PRIOR APPLICATION NUMBER: US 08/32,652

FILING DATE: 21-DEC-1994

ATTONEY/ARETY INFORMATION:

MADE: Williams Jr. Joseph A.

REGISTRATION NUMBER: 38,659

Patent No. 5877275
GENERAL INFORMATION:
APPLICANT: ATMAGULA AMAIN
TITLE OF INVENTION: CONTROLLING CELLULAR IMMUNE/INFLAMMATORY
TITLE OF INVENTION: RESPONSES WITH BETAZ INTEGRINS
NUMBER OF SEQUENCES: 53
CORRESPONDENCE ADDRESS:
ADDRESSEE: Fish & Richardson P.C.
STREET: 225 Franklin Street
CITY: BOSCON
STATE: MA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           MMSEGGPPGAEPO 1153
